# AFBR-S4N44P014M
NUV-MT Silicon Photomultiplier

Description

The Broadcom® AFBR-S4N44P014M is single-channel silicon photomultiplier (SiPM) that is used for ultra-sensitive precision measurements of single photons. This SiPM is based on the NUV-MT technology, which combines improved photo-detection efficiency (PDE) with a decreased dark count rate and reduced crosstalk compared to the NUV-HD technology. The SPAD pitch is 40 μm.

Larger areas can be covered by tiling multiple AFBR-S4N44P014M SiPMs. The encapsulation for good mechanical stability and robustness is realized by an epoxy clear mold compound, which is highly transparent down to UV wavelengths, resulting in a broad response in the visible light spectrum with high sensitivity towards the blue and near-UV region of the light spectrum. The SiPM is best suited for the detection of low-level pulsed light sources, especially for detection of Cherenkov or scintillation light from the most common organic (plastic) and inorganic scintillator materials (for example, LSO, LYSO, BGO, NaI, CsI, BaF, LaBr$_3$). This product is lead-free and compliant with RoHS.
Features

- High PDE (63% at 420 nm)
- 4-side tileable, with high fill factors
- Cell pitch: 40 μm
- Highly transparent epoxy protection layer
- Operating temperature range from –20°C to +60°C
- Excellent SPTR and CRT
- Excellent uniformity of breakdown voltage and gain between devices
- RoHS, CFM, and REACH compliant

Applications

- X-ray and gamma-ray detection
- Nuclear medicine
- Positron emission tomography
- Safety and security
- Physics experiments
- Cherenkov detection

Pad Layout

The AFBR-S4N44P014M has four cathode pads and one anode pad. The pad layout is displayed in the following figure.
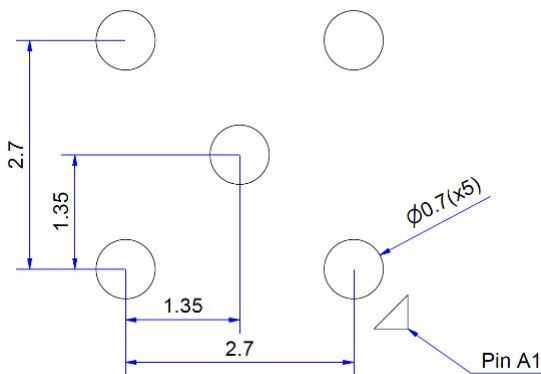

Figure 2: Pad Layout

Pad	Function
A1,A3,C1,C3	Cathode
B2	Anode

NOTE:

- Dimensions are in mm.
- A stands for anode; C stands for cathode.

Regulatory Compliance Table

Feature	Test Method	Performance
Electrostatic discharge (ESD) to the electrical pins, human-body model (contact ESD)	JESD22-A114	See Absolute Maximum Ratings.
Electrostatic discharge (ESD) to the electrical pins, charged-device model	JESD22-C101F	See Absolute Maximum Ratings.
Restriction of hazardous substances directive	RoHS Directive 2011/65/EU Annex II	Certified compliant.

Absolute Maximum Ratings

Stresses in excess of the absolute maximum ratings can cause damage to the devices. Limits apply to each parameter in isolation. Absolute maximum ratings are those values beyond which damage to the device may occur if these limits are exceeded for other than a short period of time.

Parameter	Symbol	Min.	Max.	Unit
Storage Temperature	T_{SG}	−20	+60	°C
Operating Temperature[a]	T_A	−20	+60	°C
Soldering Temperature[b,c]	T_{SOLD}	—	245	°C
Lead Soldering Time[b,c]	t_{SOLD}	—	60	s
Electrostatic Discharge Voltage Capability (HBM)	ESD_{HBM}	—	2	kV
Electrostatic Discharge Voltage Capability (CDM)	ESD_{CDM}	—	500	V
Operating Overvoltage	V_{OV}	—	16	V

a. Biased at constant voltage = 12V above breakdown.

b. The tile is reflow solderable according to the solder diagram shown in Figure 4.

c. In accordance with Broadcom's PCN-272931, there will be a transition in the moisture level definition (MLD) for the NUV-MT SiPM series from MSL 6 to MSL 5. Refer to the label of your devices for details on the MLD. For parts in accordance with MSL 6, baking at 125°C for 16 hours is mandatory before soldering. The floor life is 4 hours at 30°C and 60% relative humidity. For parts with an MLD according to MSL 5, the floor life is 48 hours at 30°C and 60% relative humidity. No baking is required before soldering unless the floor life is exceeded. For more details on soldering and handling, refer to Broadcom's application note AFBR-S4NxxPyy4M-AN602.

Single Device Specification

Features are measured at 25°C unless otherwise specified.

Geometric Features

Parameter	Symbol	Value	Unit
Package outer dimensions	PD	4.31 x 4.18	mm^2
Single device area	DA	3.84 x 3.74	mm^2
Active area	AA	3.72 x 3.62	mm^2
Micro cell pitch	L_{CELL}	40	µm
Number of micro cells per element	N_{CELLS}	8334	—

Optical and Electrical Features

Features are measured at 12V OV and 25°C unless otherwise specified.

Parameter	Symbol	Min.	Typical[a]	Max.	Unit	Reference Plots
Spectral range	λ	250	—	900	nm	Figure 5
Peak sensitivity wavelength	λ_{PK}	—	420	—	nm	Figure 5
Breakdown voltage	V_{BD}	32	32.5	33	V	Figure 7
Temperature coefficient of breakdown voltage	$\Delta V_{BD}/\Delta T$	—	30	—	mV/°C	—
Photo-detection efficiency[b]	PDE	—	63	—	%	Figure 5, Figure 6
Dark current per element	I_D	—	3.3	—	µA	Figure 7
Dark count rate per element[c]	DCR	—	1.7	—	Mcps	Figure 8
Dark count rate per unit area	DCR_{mm2}	—	125	—	kcps/mm^2	—
Gain	G	—	7.3	—	x10^6	Figure 9
Optical crosstalk	P_{XTALK}	—	23	—	%	Figure 10
Afterpulsing probability	P_{AD}	—	< 1	—	%	Figure 10
Recharge time constant	τ_{FALL}	—	55	—	ns	Figure 11
Nominal terminal capacitance[d]	C_T	—	580	—	pF	—
Temperature coefficient of gain[e]	$\Delta G/\Delta T$	—	1.46	—	x10^4/°C	—

a. Measured at 12V OV.

b. Measured at the peak sensitivity wavelength. Measurement does not include correlated noise, such as afterpulsing or optical crosstalk.

c. Measured at 0.5 p.e. amplitude. Measurement does not include delayed correlated events.

d. Measured using the input sine wave with f = 200 kHz and Vin = 500 mV.

e. Calculated from the gain dependence on V and the breakdown voltage temperature coefficient: dG/dT = dG/dV × dVBD/dT.

Reference Plots

Features are measured at 25°C unless otherwise specified. Plotted data represents typical values.
